Top Level Diagram

Graph Manager	Data Manager	Calculator Manager
Contains graph specifications. Contains personal UI.	Contains data arrays and associated structures. Contains personal UI.	Handles all evaluation/storage requirements of a set of calculators. Contains personal UI

Director

Co-ordinates comms between Managers and user access to Manager UIs

## Original Anticipated Operation:

- User enters all equations/constants into the Calculator Manager - selects particular named calculators as necessary
- User describes a record, data set, set_input and IO_map to the Data Manager on which to perform calculator evaluations
- User describes one or more graph specifications to the Graph Manager to display results of the evaluation
- User utilises the Director to match data set with a particular graph specification and to initiate calculations upon this data.
- User observes results by graph and array means

Project State:

Calculator Manager : completed
Data Manager :   data types and UI completed
Graph Manager :   data types and UI completed -
                         also capable of displaying graphs
                         according to a graph specification -
                         not linked to Calculator Manager.
Director :   unimplemented
